

## Dashboarding Workshop

As a Data Analyst, the HR department of a big company contacted you because they have some problem understanding some phenomena happening with their employee from a Human Resources point of view.

The main issues this company is facing are the following :

- Work accident
- People retention
- Employee satisfaction

In order to understand the situation better, you will do a dashboard with appropriate graph and data visualization representations.

### Step 1 :

Open the Data (HR.csv) in R and identify the key variables

### Step 2 :

Brainstorm to find the best KPI's and graphs you could display to have a good overview of the HR situation regarding the 3 axis mentioned before.

### Step 3 :

Prototype the dashboard by a short drawing

### Step 4 :

Do the dashboard with flexdashboard
